

# Luis Tanafranca

[lat13@sfu.ca](mailto:lat13@sfu.ca) | [linkedin.com/in/luistanafranca](https://linkedin.com/in/luistanafranca) | [github.com/UnifyCN/web-app](https://github.com/UnifyCN/web-app) | [Portfolio](#) | Vancouver, BC

## SKILLS

---

**Languages:** Python, Java, SQL, JavaScript/TypeScript (production, AI-assisted), C++ (coursework)

**AI & Data:** LLM APIs, agentic development workflows (Claude Code, MCP), retrieval-augmented generation, pandas, scikit-learn, embeddings

**Backend & Frontend:** FastAPI, Flask, Spring Boot, REST APIs, HTTP, PostgreSQL, pgvector, React, Next.js

**DevOps:** Git, GitHub Actions, CI/CD, pull-request code review, Docker, Linux, Sentry, Playwright

**Fundamentals:** Object-oriented design, data structures and algorithms, asynchronous programming, computer architecture

## PROFESSIONAL EXPERIENCE

---

### Unify Social

Feb 2026 – Present

*Software Engineer (Web Lead)*

*Remote*

- Built nearly all of the web app for a settlement platform serving 500+ users, on a production PostgreSQL database shared with a separately developed mobile app; RBC Foundation Best Project Award, Desjardins Community Empowerment Challenge winner at Enactus Canada Nationals
- Built and shipped AI features in production: an AI assistant using retrieval-augmented generation over a vector knowledge base and AI document generators, with server-side keys, per-user quotas, and provider fallback
- Built a scheduled data pipeline pulling from 12 sources through 7 connectors; traced 30 of 69 misclassified records to an upstream field the sources never set, fixed it, and made overlapping runs safe with a unique index and upserts
- Fixed an asynchronous race where out-of-order saves wiped user edits by applying updates to the latest state and serializing writes through one promise chain
- Caught a database change before release that would have broken AI chat on both web and mobile, by checking it against the live schema; removed about 1,100 lines and reused the shared function
- Work daily in an agentic development workflow with Claude Code, planning, testing, and reviewing every change across 120+ pull requests with CI and automated code review

### Spotwork (SPOT App) – Riipen Level UP

July 2026 – Sept 2026

*Technical Specification (Student Placement)*

*Remote*

- Analyzed why a 40+ listing job board surfaced only 1–2 Google results, identified the risks to its visibility, and proposed a written fix specification to the founder

### STEMA Learning

Jan 2025 – Present

*Classroom Facilitator*

*Surrey, BC*

- Teach coding, robotics, and STEM to 20+ students per session, explaining technical concepts clearly and adapting to mixed skill levels

## PROJECTS

---

### Lens | Python, FastAPI, React | [Live](#) | [GitHub](#)

April 2026 – Present

- Building an AI interview prep tool that turns practice answers into insights; replaced unreliable single-call LLM scoring with a four-part evidence-grounded rubric returning structured JSON
- Compared keyword and embedding-based approaches against a labeled set before choosing the LLM rubric, and fixed a prompt-injection issue flagged in review with a regression test

### Pipeline Processor Simulator | C++ – CMPT 305 (group of 3)

April 2026

- Built a cycle-accurate 5-stage pipelined processor simulator in object-oriented C++ processing 30M-instruction traces; implemented the pipeline logic and hazard handling

### Unify Social Landing Page | Astro, TypeScript, Cloudflare, Playwright | [unifysocial.ca](https://unifysocial.ca)

March 2026

- Built and deployed the marketing site with Playwright smoke tests gating the CI/CD deploy

### Turtle Trips AI | Python, Flask, Gemini API – Stormhacks

October 2025

- Built a Flask web app at a hackathon that uses the Gemini API for structured itinerary generation and Google Maps APIs for routes

### Vancouver Amenity Recommender | Python, pandas, scikit-learn – CMPT 353

March 2025

- Built a data science pipeline in pandas over OpenStreetMap data, using sentence-transformer embeddings and similarity search to recommend amenities

### NutriFit | Java, Spring Boot, SQL, Docker – CMPT 276 (group of 4)

Spring 2024

- Built an object-oriented Java Spring Boot web app (MVC) in a 4-person team with a SQL database and role-based login; wrote unit tests and deployed with Docker

## EDUCATION

---

### Simon Fraser University

Sept 2022 – Present

*BSc, Computing Science (Expected December 2027)*

*Burnaby, BC*

- Relevant coursework: Intro to Artificial Intelligence, Computational Data Science, Data Structures & Algorithms, Database Systems I & II, Computer Systems
